Profile

Dedicated, detail-oriented, and self-motivated software developer. Hands on, successful software Engineer with verifiable successful teams in delivering appropriate technology solution for desktop and Mobil products. Comprehensive knowledge of platform development, enterprise architecture, agile methodologies, cloud services, and web-based applications.

Technical Skills

Languages: React JS, Next JS, JavaScript, TypeScript, Redux, Redux Toolkit (RTK), TanStack Query, ContextApi, jQuery, Bable, Webpack, Web Socket, Axios, Fetch, REST API, GraphQL, HTML, CSS, Bootstrap, Tailwind CSS, Material UI (MUI)

Developer Tools: GitHub, Jira, Trello, Swagger, S3, Postman, Ubuntu, Windows, VS Code

Professional Experience

Company: NeoSOFT, Mumbai Lower Parel

June 2025 – Present

Axis Mutual Fund: Lead Frontend Developer for Payment flow, Onboarding, STP and Switch at Axis Mutual Fund

- Built scalable UIs using React, TypeScript, and Next.js; handled architecture, documentation, and code reviews
- Improved quality, performance, and reliability through clean code practices and cross-team collaboration

Technologies involved: React, TypeScript, and Next.js

Company : Extern Labs

July 2022 – May 2025

- **NitroXpress:** NitroXpress Logistic Services is a comprehensive, multipurpose solution designed to handle all your shipment, transportation, and delivery-related needs with efficiency, reliability, and speed.
 - It's third-party logistics provider offering tailored solutions for unique shipping needs.
 - The system supports multiple user roles—Admin, B2B, B2C, delivery personnel, and employees each with tailored dashboards and secure, role-based access controls.
 - Includes a built-in payment gateway for smooth transactions, a secure wallet system for easy balance management, and a manual tracking system for monitoring shipment status.

Technologies involved: React JS, Redux thunk, Redux Toolkit(RTK), Axios, Bootstrap, CSS

- **Tipco:** Tipco is a real-time monitoring application developed using React.js, aimed at managing and analyzing data from embedded IoT devices.
 - The system captures and displays key hardware metrics such as vibration, motor rotation, and pressure, offering valuable insights into device performance.
 - Utilizes WebSocket technology to stream live data updates, ensuring users always have the most current information without page refreshes.

Technologies involved: React JS, TanStack Query, Websocket, Axios, Bootstrap, CSS

- **Nuego:** Nuego is a modern electric bus travel web application aimed at enhancing the digital booking experience for passengers. My contributed to the development of several key pages , focusing on clean UI design, responsive layouts, and seamless user experience.
 - Developed and maintained frontend of tour and travel part and many more pages.
 - Developed the complete website for GreenCell Mobility, a key player in India's electric mobility space and the parent company of NueGo, India's first premium electric intercity bus service.

Technologies involved: React JS, Axios, Bootstrap, CSS

- **Harborbites:** HarborBites is a smart restaurant management application where users can scan a QR code placed at their table to instantly view the digital menu and place orders directly from their device, enhancing both hygiene and convenience.
 - Integrated with a Kitchen Display System, HarborBites ensures that orders placed by customers are immediately reflected in the kitchen, allowing chefs to prioritize and manage tasks efficiently without relying on paper tickets.
 - The system supports real-time order updates, table management, and kitchen coordination, leading to faster order processing, better communication, and improved overall workflow for restaurant staff.

Technologies involved: React JS, Redux Toolkit(RTK), Websocket, Axios, Tailwind Css, CSS

- **Fintellir:** Fintellir is a stock-focused web application that allows firm users to upload, manage, and analyze ticker data.
 - Contributed to integrating and processing various client-specific Excel sheets and stock tickers, ensuring accurate and efficient data handling.

Technologies involved: Next JS, ContextApi, Axios, Tailwind Css, CSS

Company: Maitretech Solution

June 2021 – June 2022

- **AirPMO:** AirPMO is a construction management application designed to help project owners oversee and streamline all aspects of their construction sites from a centralized platform.
 - The system supports multiple user roles and permissions, allowing for secure access control based on responsibilities and authority levels.
 - It includes zone-based access management, where different users are granted permissions specific to their assigned site zones or project areas.

Technologies involved: Next JS, SimpleR State, Axios, Tailwind Css, CSS

Company: Jio (Internship)

June 2018 – July 2018

- Successfully completed project work titled “**RF Macro Planning and Optimization**”, focused on enhancing network coverage and quality.
- Learned fundamentals of telecom network architecture, frequency reuse, and signal optimization.

Achievements

- Won 1st place in an internal company hackathon at **ExternLabs**, building a real-time collaboration tool using React and WebSockets.

Education

Arya Institute Of Engineering And Technology <i>B. Tech</i>	Jaipur, Rajasthan 2015 – 2019
St. Mary's Convent Higher Secondary School <i>Higher secondary</i>	Bankhedi, India 2015
St. Mary's Convent Higher Secondary School <i>Secondary</i>	Bankhedi, India 2013
